1. RATIONALE

Students in the previous semester have learned procedure for developing programs to solve simple problems using basic features of very popular language i.e. structured programming language 'C'. This course deals with some advanced features of the 'C' language. The programming skills thus acquired can be used for developing programs with advance level programming features which in turn will be helping in developing practical applications for the scientific, research and business purposes.

2. COMPETENCY

The course content should be taught and implemented with the aim to develop different types of skills so that students are able to acquire following competency:

- i. Develop structured, modular and memory efficient programs in 'C' using arrays, functions, pointers and data files.**
